POLARIZATION COMPON

We offer a wide range of cube and plate polarizers to perform under different operating conditions including high energy, broad bandwidths, low dispersion and high extinction. Our polarization components are designed to meet the most demanding needs and are available in a variety of coatings and materials to suit your operating wavelength(s). Custom dimensions and coatings are available for OEM applications.

We encourage you to contact our knowledgeable sales staff for more information.

Don't see exactly what you are looking for?

CVI Laser Optics specializes in prototype to volume production manufacturing!

Give us a call and we will be honored to assist you with your custom needs.

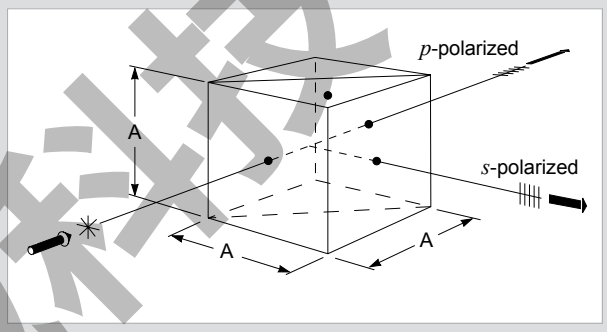
APPLICATION NOTE

Polarizing cube beamsplitters separate polarization components of an incident beam into two highly polarized output beams separated by a 90° angle. The beam that passes straight through the cube is linearly *p*-polarized with the electric field vector parallel to the plane of incidence. The beam that emerges from the cube at right angles to the incident beam is linearly *s*-polarized with the electric field vector orthogonal to the plane of incidence.

When using a polarizing cube beamsplitter, remember:

- For polychromatic beam-combining applications, the two incoming beams must have properly oriented polarization states. This can be achieved by using a CVI Laser Optics half-wave plate (refer to QWPM or QWPO) to rotate the polarization state of the beam.
- Only collimated beams of light can be used.
- Light should be incident on the beamsplitter coating (hypotenuse surface) at an angle of 45° ± 2°.



Polarizing cube beamsplitters

UV LASER LINE POLARIZING CUBE BEAMSPLITTERS: UPBS

These polarizing cube beamsplitters are made from fused silica to optimize UV performance.

To avoid damage when using a laser, be sure to orient the cube so that the beam enters through the prism marked with the dot.

- Fused-silica cube polarizers for doubled argon, tripled Nd:YAG, quadrupled Nd:YAG, and UV excimer lasers
- For use with fluences less than 10 mJ/cm^2
- Index matching optical adhesive assembly (low absorbing, high UV transmission)
- Contact CVI Laser Optics for alternate wavelengths, dimensions, or other specification changes for OEM applications

Specifications

Product Code: UPBS

Optical Material:
Standard Grade Corning 7980 1-D (Fused Silica)

Edge Dimension Tolerance (A): ±0.25mm

Surface Quality: 20-10 scratch-dig per MIL-PRF-13830b

Transmitted Wavefront Error (TWE): < λ/4 p-v at 633nm

Clear Aperture: ≥ 85% of central dimension

Field of View: ±2° typical

Anti-reflection Coating: R ≤ 0.25%, all entrance and exit surfaces

Extinction Ratio: T_p/T_s > 100:1

Transmission Efficiency: T_p > 90.0%

Reflection Efficiency: R_s > 99.0%

Damage Threshold:
Pulsed: 10 mJ/cm^2, 20ns, 20Hz at 266nm
cw: 10 W/cm^2 at 266nm

Specifications

Product Code: PBS

Optical Material: N-BK7

Edge Dimension Tolerance (A): ±0.25mm

Surface Quality: 20-10 scratch-dig per MIL-PRF-13830b

Transmitted Wavefront Error (TWE):
< λ/4 p-v at 633nm

Clear Aperture: ≥ 85% of central dimension

Field of View: ±3°

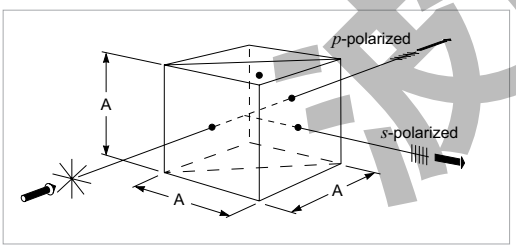
Anti-reflection Coating: R ≤ 0.25% per surface

Extinction Ratio: T_p/T_s > 1000:1

Transmission Efficiency: T_p > 95%

Reflection Efficiency: R_s > 99.9%

Damage Threshold:
Pulsed: 1 J/cm², 20ns, 20Hz at 1064nm
cw: 100 W/cm² at 515nm



PBS laser line polarizing beamsplitter cubes

Polarizing beamsplitter cubes are used to split a laser beam into two orthogonally polarized components; *p*-polarization is transmitted straight through while *s*-polarization is reflected at 90°.

To avoid damage when using a high power laser, be sure to orient the cube so that the beam enters through the prism face marked with the dot.

- Projection systems, signal monitoring, color separation and recombination, optical coupling
- Fewer ghost images than plate beamsplitters
- Index matching optical adhesive assembly (low absorbing, high VIS/NIR transmission)
- 1000:1 extinction ratio

HIGH ENERGY LASER LINE POLARIZING CUBE BEAMSPLITTI

CVI Laser Optics' high-energy, polarizing cube coatings are designed for optimal extinction ratio (Tp/Ts) and laser damage threshold. Via optical contacting, the cube remains free of adhesive within the clear aperture, preventing any environmental and spectral anomalies that can be attributed by said adhesive. For applications requiring higher transmission efficiency (i.e. T_p > 98.0%), a reduction in extinction ratio can be applied.

- Adhesive free; optically contacted
- High laser damage threshold
- 750:1 extinction ratio typical

Specifications

Product Code: PBSO

Optical Material:
Standard Grade Corning 7980 1-D (Fused Silica)

Edge Dimension Tolerance: A±0.25mm

Surface Quality: 20-10 scratch-dig per MIL-PRF-13830b

Transmitted Beam Deviation: < 5 arc minutes

Transmitted Wavefront Error (TWE): < λ/4 p-v at 633nm

Clear Aperture: ≥ 85% of central dimension

Anti-reflection Coating:
R ≤ 0.25%, all entrance and exit surfaces

Extinction Ratio:
λ > 500nm: T_p/T_s > 500:1; > 750:1 typical
λ ≤ 500nm: T_p/T_s > 250:1; > 500:1 typical

Transmission Efficiency:
T_p > 95%

Reflection Efficiency:
λ > 500nm R_s > 99.5%
λ ≤ 500nm R_s > 99.0%

Damage Threshold:
Pulsed:
25 J/cm², 20ns, 20Hz at 1064nm
15 J/cm², 20ns, 20Hz at 532nm
3 J/cm², 20ns, 20Hz at 355nm
2 J/cm², 20ns, 20Hz at 266nm
cw: 1 MW/cm² at 1064nm

These broadband polarizing beamsplitter cubes are made from N-SF2 glass to improve broadband performance. A multi-layer anti-reflective coating is applied to each face of the beamsplitter to ensure maximum transmission efficiency.

To avoid damage when using a laser, be sure to orient the cube so that the beam enters through the prism marked with the dot.

- Broadband performance
- Reflected and transmitted beams separated by 90°
- Optical adhesive assembly
- Contact CVI Laser Optics for OEM opportunites for other wavelengths or dimensions

Specifications

HIGH ENERGY BROADBAND POLARIZING CUBE BEAMSPLI

Specifications

Product Code: PBSK

Optical Material:
Standard Grade Corning 7980 1-D (Fused Silica)

Edge Dimension Tolerance (X,Y): ±0.25mm

Surface Quality: 20-10 scratch-dig per MIL-PRF-13830b

Transmitted Wavefront Error (TWE): < λ/4 p-v at 633nm

Clear Aperture: ≥ 85% of central dimension

Extinction Ratio: T_p/T_s > 1000:1

Anti-reflection Coating:
R_{avg} ≤ 0.50%, all entrance and exit surfaces

Damage Threshold:
Pulsed: 5 J/cm², 20ns, 20Hz at 1064nm
cw: 1 MW/cm² at 1064nm

An alternative to calcite and Brewster angle polarizers, the PBSK is an optimal solution for high-energy broadband or multi-line systems. Unlike cemented cube polarizers, the PBSK is optically contacted, coated with all-dielectric materials and manufactured from fused silica to ensure high transmission and high damage threshold.

To avoid damage when using a high power laser, be sure to orient the cube so that the beam enters through the prism marked with the dot.

- Designed for Pulse Lengths > 15 fs
- Contact CVI Laser Optics for other designs between 230nm and 2100nm

15.4x35.3	PBSK-700-900-100

TFP thin-film plate polarizers are the best choice when maximum laser damage resistance is necessary. Typically, thin film polarizers are used for fluences greater than 500 mJ/cm^2, where calcite air-spaced polarizers exhibit long-term tracking and cemented polarizers cannot be used at all. Applications for the TFP include usage as an intracavity Q-switch hold-off polarizer, and, in conjunction with a half-wave plate, as an extracavity attenuator for an Nd:YAG laser fundamental and its harmonics. To maximize transmission, users must make a provision in their mechanical setup for the necessary angular tuning. Note that the losses at the uncoated second surface are insignificant at 83° from Brewster's angle.

- High damage threshold Brewster-angle polarizer, >20 J/cm^2
- Angle tuning suggested to achieve maximum transmission
- Contact CVI Laser Optics for alternate wavelengths, dimensions and OEM capabilities

Specifications

Product Code: TFP

Optical Material:
Standard Grade Corning 7980 1-D (Fused Silica)

Diameter Tolerance: +0/-0.25mm

Thickness Tolerance: ±0.25mm

Wedge: ≤ 5 arc minutes

Chamfer: 0.35mm leg width at 45° nominal

Surface Quality: 10-5 scratch-dig per MIL-PRF-13830b

Surface Figure: < λ/10 at 633nm before coating on select substrates

Transmitted Wavefront Error (TWE): < λ/8 p-v at 633nm

ION BEAM SPUTTERED THIN-FILM PLATE POLARIZERS, 45°:

TFPN thin-film plate polarizers are an ideal choice when both high laser damage threshold and a 90° reflection angle are necessary. Unlike Brewster angle polarizers which work at an angle of incidence of 56°, the TFPN plate polarizer works at 45°. Consequently, the reflected and transmitted beams are separated by 90° and orthogonally polarized, just like a cube polarizer.

- High-energy laser line polarizer
- Reflected and transmitted beams separated by 90°
- No angle tuning required
- RoHS compliant
- Contact CVI Laser Optics for other wavelengths and sizes

Specifications

Product Code: TFPN

Optical Material:
Standard Grade Corning 7980 1-D (Fused Silica)

Diameter: 25.4mm +0/-0.25mm
